

DETAILED LANDSLIDE AND FLOOD HAZARD MAP OF
BUTUAN CITY (CAPITAL), AGUSAN DEL NORTE;
AND SIBAGAT, AGUSAN DEL SUR, PHILIPPINES
4118-IV-18 MAGUINDA QUADRANGLE

LEGEND :

- Main road
Secondary road
Track; trail
River
Municipal boundary
Contour (meter)
- POBLACION
Barangay center location
So. Magaling (Poblacion)
Purok/Sitio location (Barangay)
School
Hospital
Church
Proposed relocation site

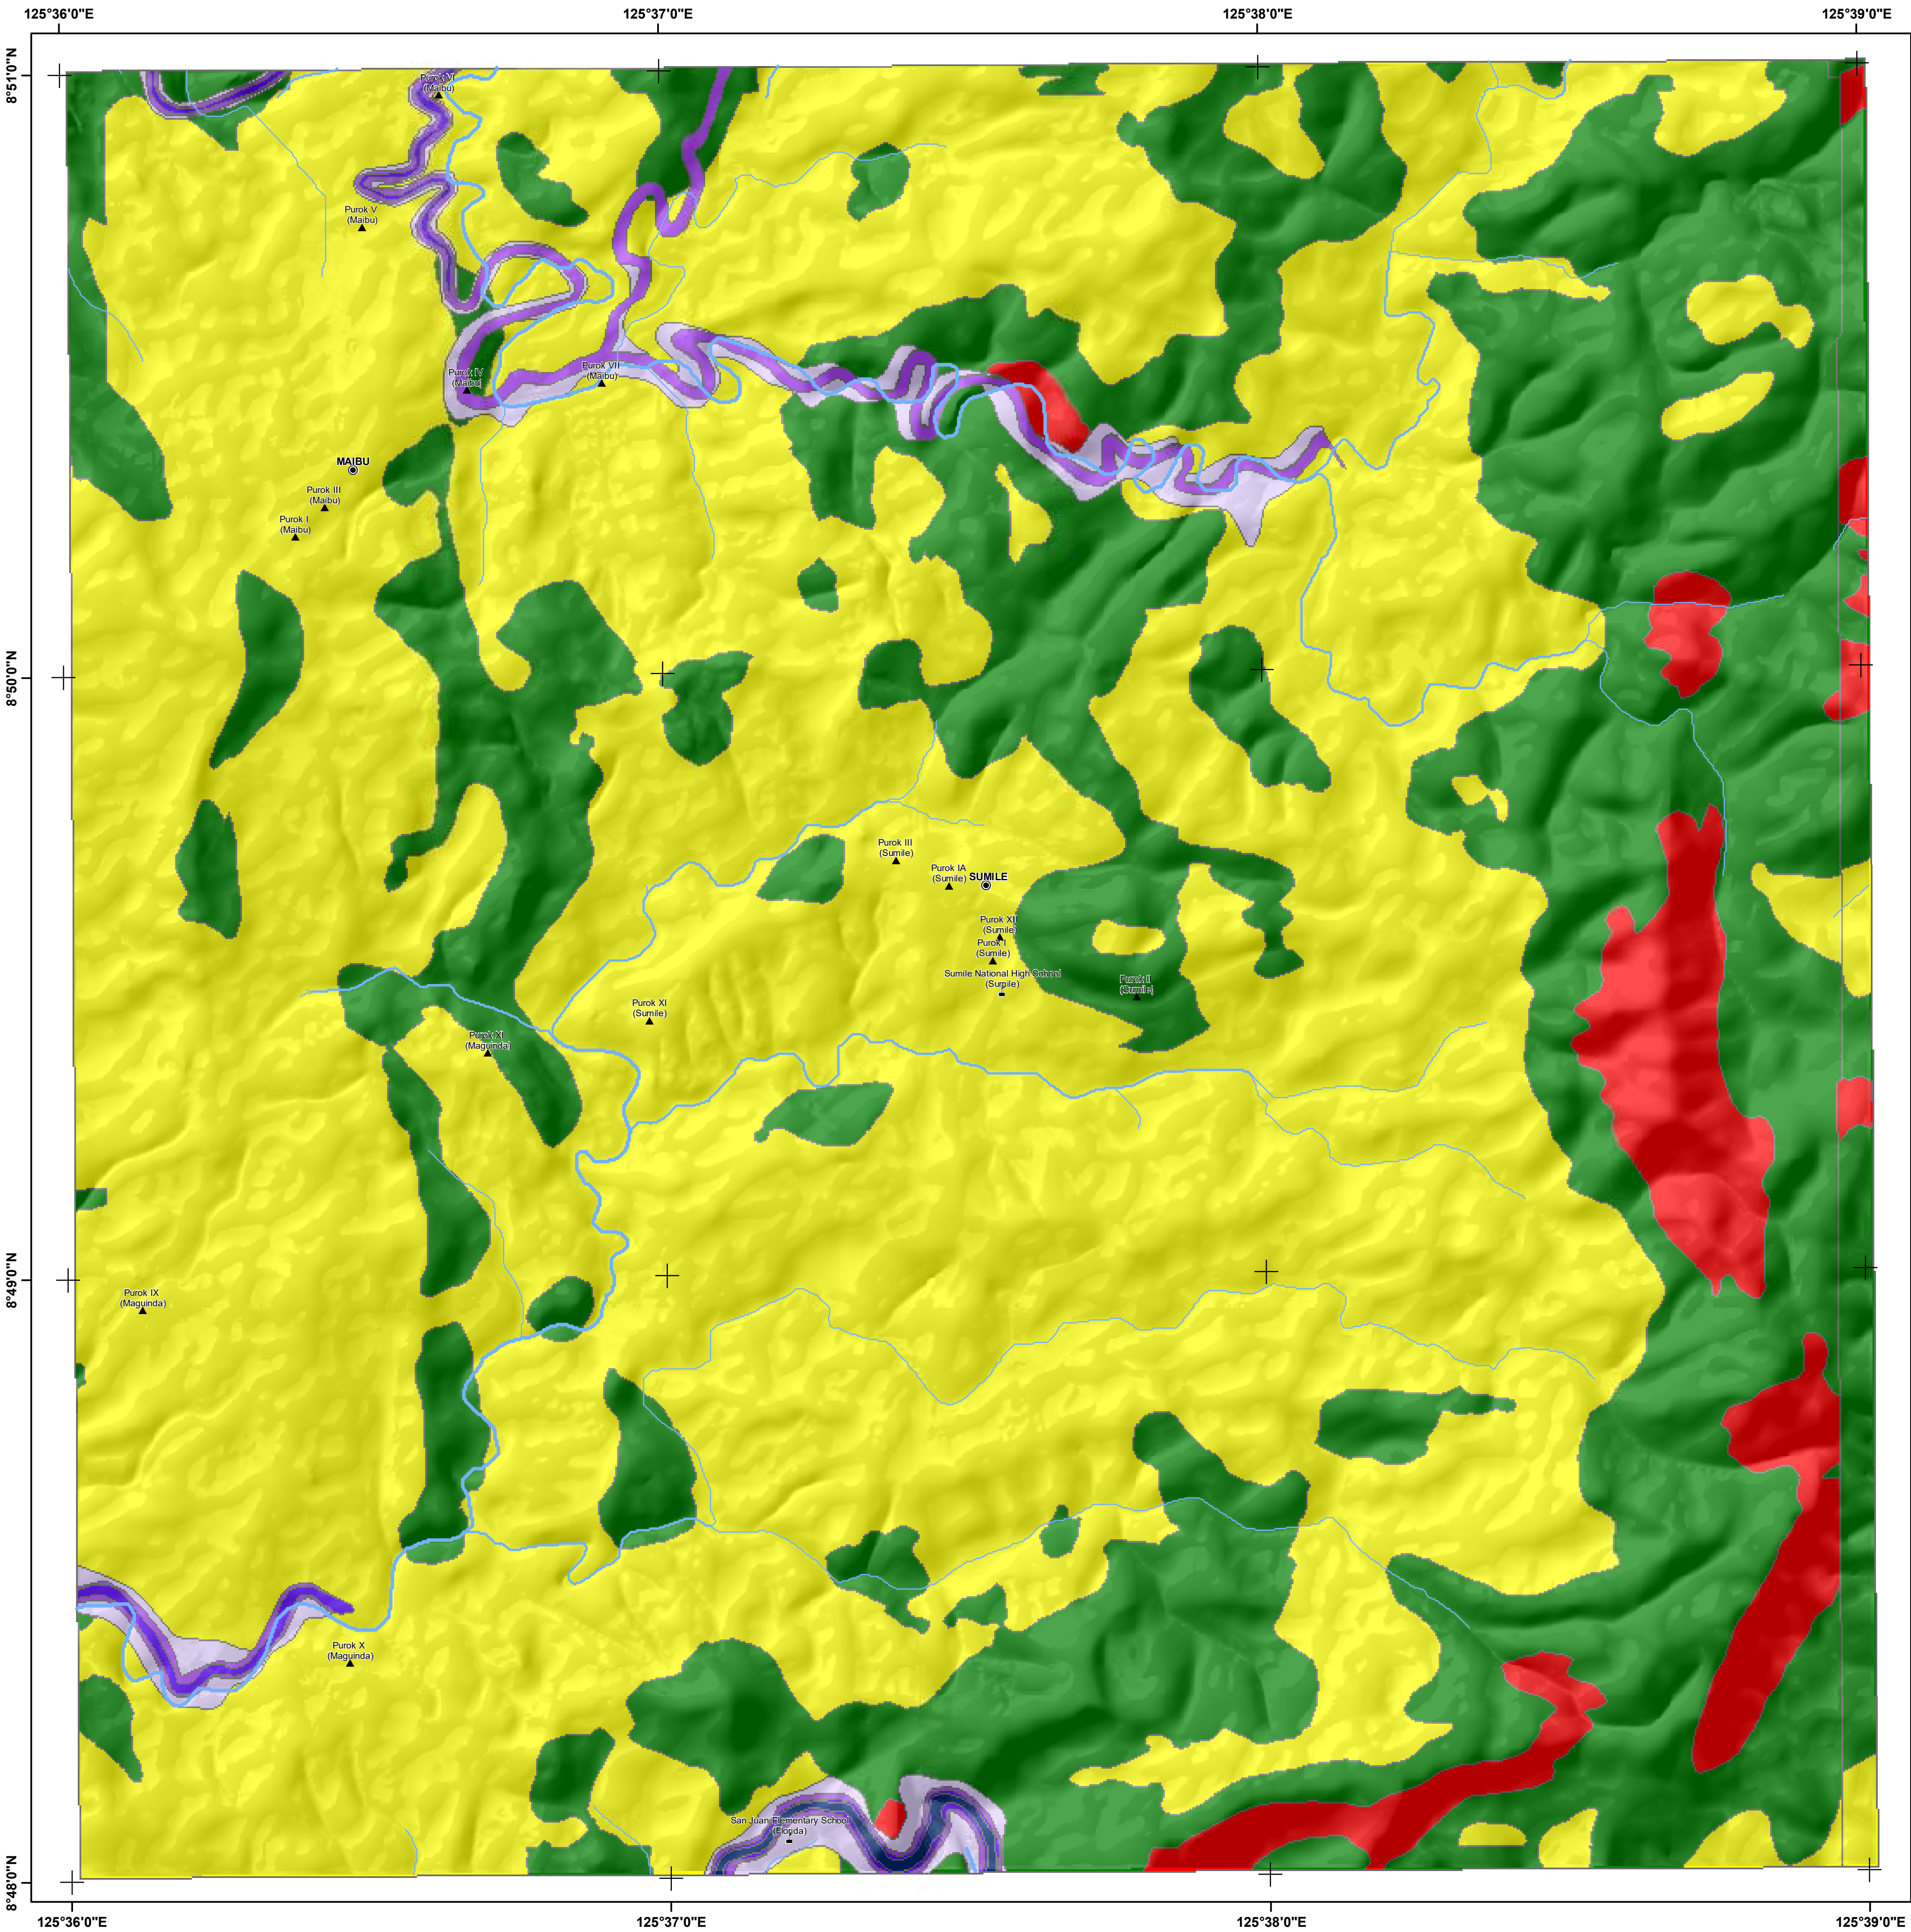

Landslide

- Very high landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor.
- High landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.
- Moderate landslide susceptibility**
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.
- Low landslide susceptibility**
Gently sloping areas with no identified landslide.
- Debris flow / Possible accumulation zone**
Areas that could be affected by landslide debris.
- Active landslide
Inactive landslide
Landslide area with mitigating measure
Rock fall/Rock slide prone area
Old landslide deposits
Recent landslide deposits
Areas susceptible to ground subsidence/sinkhole development
- Creep
Tension crack
Gully
Riverbank erosion

Flood

- Very high flood susceptibility**
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.
- High flood susceptibility**
Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.
- Moderate flood susceptibility**
Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.
- Low flood susceptibility**
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.

- Direction of rising floodwater
Direction of receding floodwater
Flood depth (meter)
Flashflood exit point
