## Landslide

- Very high landslide susceptibility**  
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor.

**High landslide susceptibility**  
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.

**Moderate landslide susceptibility**  
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.

**Low landslide susceptibility**  
Gently sloping areas with no identified landslide.

**Debris flow / Possible accumulation zone**  
Areas that could be affected by landslide debris.

**Active landslide** (Black line with triangles pointing right)

**Inactive landslide** (Dashed black line with triangles pointing right)

**Tension crack** (Blue line with triangles pointing right)

**Gully** (Black line with arrows pointing right)

**Riverbank erosion** (Orange line with triangles pointing right)

**Old landslide deposits** (Blue hatched circle)

**Recent landslide deposits** (Black hatched circle)

**Areas susceptible to ground subsidence/sinkhole development** (Dotted circle)

## Flood

- Very high flood susceptibility**

Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

**High flood susceptibility**

Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

**Moderate flood susceptibility**

Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.

**Low flood susceptibility**

Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.
