## DETAILED LANDSLIDE AND FLOOD HAZARD MAP OF VERUELA, BUNAWAN, AND LORETO, AGUSAN DEL SUR, PHILIPPINES 4117-II-14 SANTA EMELIA QUADRANGLE

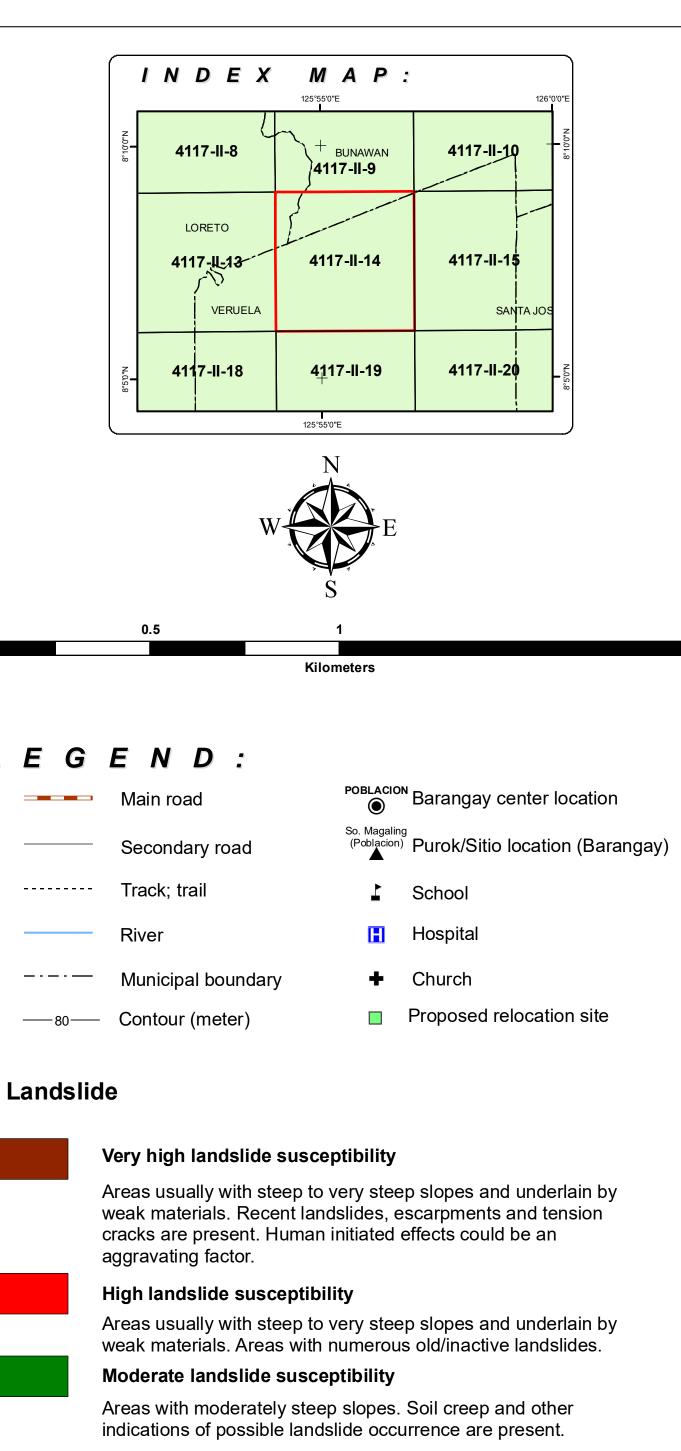

National Mapping and Resource Information Authority

**GIS Processing:** 

Lands Geological Survey Division

Mapping scale 1:10,000

Low landslide susceptibility

Gently sloping areas with no identified landslide.

**Debris flow / Possible accumulation zone** 

Areas that could be affected by landslide debris.

Active landslide -→->-> Creep דדדד Inactive landslide Tension crack

Landslide area with mitigating measure  $\longrightarrow$  Gully

Rock fall/Rock slide prone area Riverbank erosion

Old landslide deposits

Recent landslide deposits

Areas susceptible to ground subsidence/sinkhole development

## Flood

## Very high flood susceptibility

Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

**High flood susceptibility** 

Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

Moderate flood susceptibility

Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.

Low flood susceptibility

Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.
