

DETAILED LANDSLIDE AND FLOOD HAZARD MAP OF
SAN LUIS, LA PAZ, AND TALACOGON,
AGUSAN DEL SUR, PHILIPPINES
4117-IV-15 COMOTA QUADRANGLE

L E G E N D :

- | | | | |
|--|--------------------|--|---------------------------------|
| | Main road | | Barangay center location |
| | Secondary road | | Purok/Sitio location (Barangay) |
| | Track; trail | | School |
| | River | | Hospital |
| | Municipal boundary | | Church |
| | Contour (meter) | | Proposed relocation site |

Landslide

- | | |
|--|--|
| | Very high landslide susceptibility
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor. |
| | High landslide susceptibility
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides. |
| | Moderate landslide susceptibility
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present. |
| | Low landslide susceptibility
Gently sloping areas with no identified landslide. |
| | Debris flow / Possible accumulation zone
Areas that could be affected by landslide debris. |
- | | | | |
|--|---|--|-------------------|
| | Active landslide | | Creep |
| | Inactive landslide | | Tension crack |
| | Landslide area with mitigating measure | | Gully |
| | Rock fall/Rock slide prone area | | Riverbank erosion |
| | Old landslide deposits | | |
| | Recent landslide deposits | | |
| | Areas susceptible to ground subsidence/sinkhole development | | |

Flood

- | | |
|--|--|
| | Very high flood susceptibility
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods. |
| | High flood susceptibility
Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods. |
| | Moderate flood susceptibility
Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding. |
| | Low flood susceptibility
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density. |

- | | | | |
|--|----------------------------------|--|-----------------------|
| | Direction of rising floodwater | | Flood depth (meter) |
| | Direction of receding floodwater | | Flashflood exit point |
