

DETAILED LANDSLIDE AND FLOOD HAZARD MAP OF TRENTO AND SANTA JOSEFA, AGUSAN DEL SUR, PHILIPPINES

4217-III-22 CUEVAS QUADRANGLE

LEGEND :

- Main road
- Secondary road
- Track; trail
- River
- Municipal boundary
- Contour (meter)
- POBLACION
- Barangay center location
- So. Mapping (Poblacion)
- Purok/Sitio location (Barangay)
- School
- Hospital
- Church
- Proposed relocation site

Landslide

- Very high landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor.
- High landslide susceptibility**
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.
- Moderate landslide susceptibility**
Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.
- Low landslide susceptibility**
Gently sloping areas with no identified landslide.
- Debris flow / Possible accumulation zone**
Areas that could be affected by landslide debris.
- Active landslide**
- Inactive landslide**
- Landslide area with mitigating measure**
- Rock fall/Rock slide prone area**
- Old landslide deposits**
- Recent landslide deposits**
- Areas susceptible to ground subsidence/sinkhole development**
- Creep**
- Tension crack**
- Gully**
- Riverbank erosion**

Flood

- Very high flood susceptibility**
Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.
- High flood susceptibility**
Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.
- Moderate flood susceptibility**
Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.
- Low flood susceptibility**
Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.
- Direction of rising floodwater**
- Direction of receding floodwater**
- Flood depth (meter)**
- Flashflood exit point**
