## Landslide

- Very high landslide susceptibility**

Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor.

**High landslide susceptibility**

Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.

**Moderate landslide susceptibility**

Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.

**Low landslide susceptibility**

Gently sloping areas with no identified landslide.

**Debris flow / Possible accumulation zone**

Areas that could be affected by landslide debris.

 Active landslide
  Creep

 Inactive landslide
  Tension crack

 Landslide area with mitigating measure
  Gully

 Rock fall/Rock slide prone area
  Riverbank erosion

 Old landslide deposits

 Recent landslide deposits

 Areas susceptible to ground subsidence/sinkhole development

## Flood

- 
- |  | Very high flood susceptibility   |
|--|--|
|  | Areas likely to experience flood heights of greater than 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.         |
|  | <b>High flood susceptibility</b>   |
|  | Areas likely to experience flood heights of greater than 1 up to 2 meters and/or flood duration of more than 3 days. These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods. |
|  | <b>Moderate flood susceptibility</b>   |
|  | Areas likely to experience flood heights of greater than 0.5m up to 1 meter and/or flood duration of 1 to 3 days. These areas are subject to widespread inundation during prolonged and extensive heavy rainfall or extreme weather condition. Fluvial terraces, alluvial fans, and infilled valleys are areas moderately subjected to flooding.   |
|  | <b>Low flood susceptibility</b>  |
|  | Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.   |

-  Direction of rising floodwater  
 Direction of receding floodwater  
 Flood depth (meter)  
 Flashflood exit point
