DETAILED LANDSLIDE AND FLOOD HAZARD MAP OF TUBAJON, DINAGAT ISLANDS, PHILIPPINES 4121-IV-16 IMELDA QUADRANGLE

GIS Processing:

Lands Geological Survey Division

Areas likely to experience flood heights of 0.5 meter or less and/or flood duration of less than 1 day. These areas include low hills and gentle slopes. They also have sparse to moderate drainage density.

INDEX MAP:

Track; trail

aggravating factor.

Old landslide deposits

Recent landslide deposits

Very high flood susceptibility

High flood susceptibility

Moderate flood susceptibility

Very high landslide susceptibility

High landslide susceptibility

Low landslide susceptibility

Moderate landslide susceptibility

Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension

Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old/inactive landslides.

Areas with moderately steep slopes. Soil creep and other indications of possible landslide occurrence are present.

Areas susceptible to ground subsidence/sinkhole development

Areas likely to experience flood heights of greater than

These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows

such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

Areas likely to experience flood heights of greater than 1 up to

Areas likely to experience flood heights of greater than 0.5m up to

2 meters and/or flood duration of more than 3 days.

2 meters and/or flood duration of more than 3 days.

1 meter and/or flood duration of 1 to 3 days. These

These areas are immediately flooded during heavy rains of several hours; include landforms of topographic lows such as active river channels, abandoned river channels and area along river banks; also prone to flashfloods.

Gently sloping areas with no identified landslide.

Areas that could be affected by landslide debris.

Debris flow / Possible accumulation zone

cracks are present. Human initiated effects could be an
