

# GEOHAZARD MAP

## MALINAO, Dinagat Is. QUADRANGLE (4121-IV-23)

Coverage:  
Mun. Tubajon  
Brgys. Diaz  
Malinao

### LEGEND

- Barangay
- Purok
- School
- Health Facility
- Building
- Bridge
- Wellex Relocation Site
- Wellex Mine Facility
- Scarp
- Road
- Municipal Boundary
- Contour (20m)
- Shoreline
- River & Creek
- Mangrove Area
- Coastal Erosion
- Coastal Accretion
- Accumulation Zone

### FLOOD PRONE SUSCEPTIBILITY

- Very High
- High
- Moderate
- Low

### LANDSLIDE SUSCEPTIBILITY

- Very High
- High
- Moderate
- Low

### LANDSLIDE

**VERY HIGH**  
Areas usually with steep to very steep slopes and underlain by weak materials. Recent landslides, escarpments and tension cracks are present. Human initiated effects could be an aggravating factor.

**HIGH**  
Areas usually with steep to very steep slopes and underlain by weak materials. Areas with numerous old and inactive landslides.

**MODERATE**  
Areas with moderately steep slopes. Soil creep and other indications for possible landslide occurrence are present.

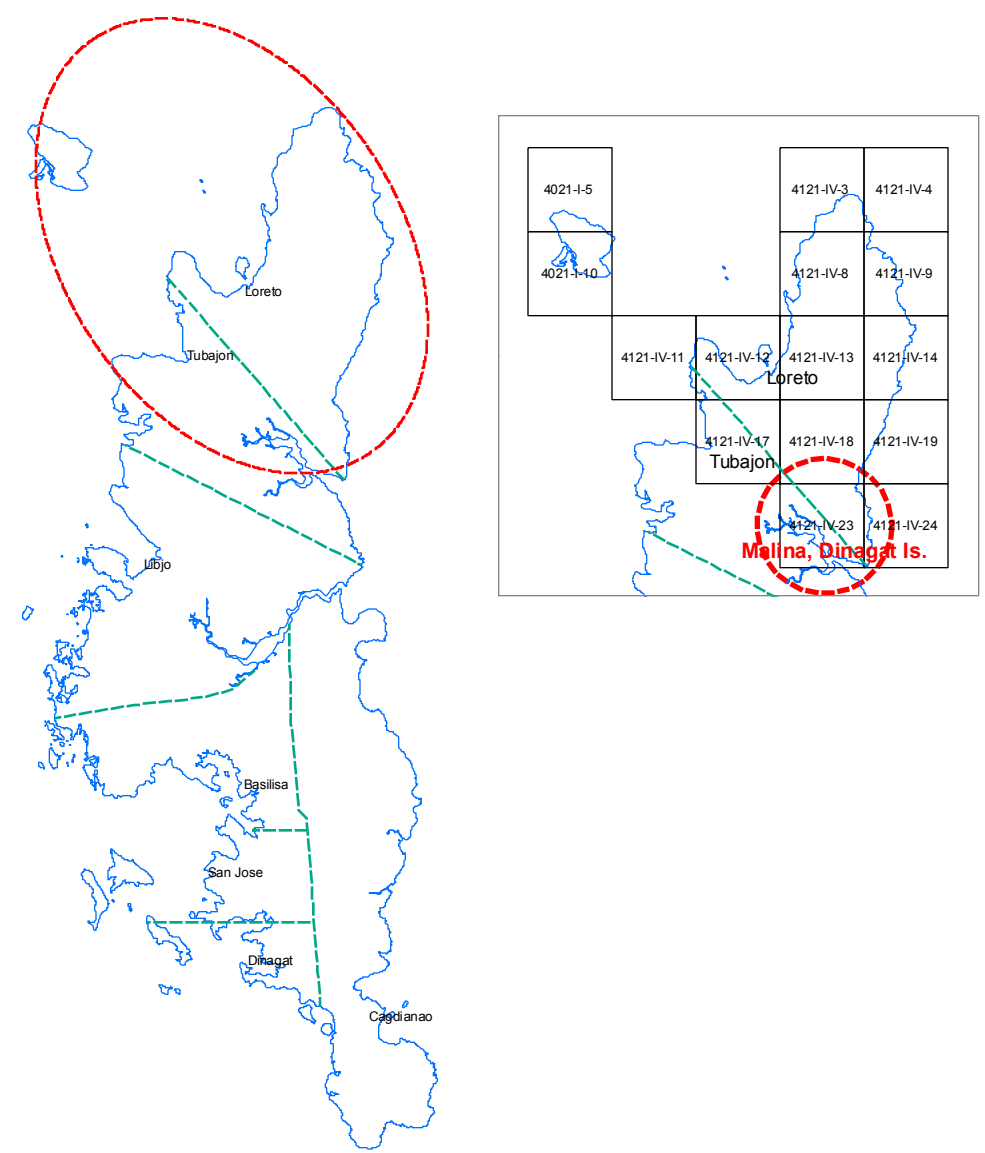

**LOW**  
Gently sloping areas with no identified landslides.

### FLOOD

**HIGH**  
Areas for which the combination of factors is likely to create adverse flood and inundation problems. This category includes areas along large streams with very small channel slopes and broad floodplains; landforms of topographic lows, particularly active river systems, deltas, abandoned river channels, and areas adjacent to river banks; also include portions of the river system where channels are perched due to repeated deposition of sediments; and part of the coastal areas affected by storm surge and fluctuating sea tide levels.

**MODERATE**  
Areas for which the combination of factors is less likely to create serious flood problems. These areas are the less-inundated of the floodplains, deltas river terraces, and old channels; also include the less flood-prone areas near the coast.

**LOW**  
Areas for which the combination of factors is unlikely to create serious flood problems; include low lying topographic landforms least affected by flood and inundation.
